

Protect yourself!

With these **6** Fraud Prevention Tips

1

Don't take the bait!

Phishing is when a scammer calls you, texts or emails you, or uses social media to trick you into clicking a malicious link that downloads malware or steals your personal information.

2

Change your passwords

Change passwords frequently and make them complex and hard to guess. Do not use the same password for different accounts.

3

Don't click on suspicious links.

Verify links in emails or text messages before you click on them. If you don't know the sender, delete!

6

Check your bank accounts daily.

Look online every day for transactions that you didn't make. Immediately report anything suspicious.

4

Use trusted sites only.

Always look at the website address to ensure it makes sense and is legitimate. Access your online banking directly through official sites or apps, never through a search engine.

5

Sign up for alerts

Text or email alerts will keep you apprised of any activity on your accounts.
